PROFESSIONAL SUMMARY

Agricultural Engineering graduate with hands-on field experience as an Agriculture Officer, supporting the implementation of the Pradhan Mantri Krishi Sinchayee Yojana (PMKSY) scheme, including micro-irrigation systems (drip and sprinkler), water-use efficiency guidance, and field-level coordination with farmers. Strong grounding in agricultural land assessment, irrigation planning, and scheme documentation, complemented by additional professional experience in technology, including building data-driven monitoring systems for agricultural and environmental use cases.

CORE COMPETENCIES

- **Micro-Irrigation Systems:** Drip irrigation, sprinkler irrigation, system implementation and monitoring.
- **Government Schemes:** Pradhan Mantri Krishi Sinchayee Yojana (PMKSY) implementation and compliance.
- **Field Operations:** Land assessment, irrigation requirement analysis, field visits, progress monitoring.
- **Farmer Support & Coordination:** Water-use efficiency guidance, farmer engagement, field-level team coordination.
- **Documentation:** Field records, farmer details, and scheme-related reporting.
- **Technology-Enabled Agriculture:** Experience building remote monitoring tools for environmental and agricultural data.

WORK EXPERIENCE

Roots Irrigation Tiruvannamalai, Tamil Nadu, India *Agriculture Officer* Aug 2021 – Jul 2022

- Worked on agricultural irrigation activities under the **Pradhan Mantri Krishi Sinchayee Yojana (PMKSY)** scheme, supporting field-level implementation of micro-irrigation projects.
- Supported the implementation and field monitoring of **drip and sprinkler irrigation systems**, including inspection of installation progress and irrigation coverage.
- Conducted field visits to assess **land conditions, irrigation requirements, water availability, and system suitability** for agricultural applications.
- Assisted in evaluating irrigation system performance and identifying field-level issues related to **water distribution, irrigation coverage, and installation quality**.
- Worked with micro-irrigation components such as **drip laterals, emitters, sprinklers, filters, valves, and related field equipment** during project implementation and inspection activities.
- Supported farmers with practical guidance on **water-use efficiency, irrigation practices, and proper operation of micro-irrigation systems**.
- Coordinated with farmers, field teams, and project stakeholders to monitor implementation progress and resolve field-level irrigation issues.
- Maintained **field inspection records, farmer details, implementation documentation, and scheme-related reports** for project activities.

Thidiff Technology Bengaluru, India

Frontend Engineer / Full Stack Developer (Additional Experience) Jan 2023 – July 2026

- Built **WQ DataLive**, a real-time water quality monitoring system providing live telemetry, automated threshold alerts, and compliance reporting for environmental datasets — applying agricultural/environmental domain knowledge to a technology platform.
- Led frontend development across 3+ SaaS web applications using React.js, Next.js, and Tailwind CSS.
- Built API integrations (Zoho Books, WhatsApp Business, Firebase) to automate business workflows and alerts.
- Owned end-to-end manual QA — test plans, regression testing, and defect tracking.

CERTIFICATIONS & TRAINING

Software Testing (Manual & Automation) TestLeaf, Chennai

- Hands-on training in Manual Testing, Selenium WebDriver, Java, TestNG, and framework design for real-time project execution.

EDUCATION

Bachelor of Engineering (B.E.) in Agricultural Engineering 2017 – 2021

SNS College of Technology, Coimbatore
